SUMMARY

Backend engineer with seven years building payment and data platforms in TypeScript and Go. Led the move of a ledger service to event sourcing at 40M transactions a month. Looking for a senior role on a platform team that owns reliability end to end.

EXPERIENCE

Senior Software Engineer Mar 2022 – Present
Northwind Payments Toronto, ON

- Rebuilt the ledger service on event sourcing in TypeScript and Postgres, handling 40M transactions a month with zero reconciliation gaps
- Cut p95 checkout latency from 820ms to 310ms by moving fraud scoring to an async Kafka pipeline
- Led a team of four through an on-call redesign that reduced pages per week from 23 to 6
- Wrote the internal guide to idempotent APIs, now required reading for new backend hires

Software Engineer Jun 2019 – Feb 2022
Fieldstone Analytics Montréal, QC

- Built a Go ingestion service that loads 2TB of sensor data a day into ClickHouse
- Replaced nightly batch exports with change data capture, so dashboards went from 24 hours stale to under a minute
- Introduced Terraform for all AWS infrastructure across three environments

Junior Developer Aug 2017 – May 2019
Brightline Studio Ottawa, ON

- Shipped React and Node features for twelve client projects, from discovery to launch
- Added end-to-end tests with Playwright that caught three release-blocking bugs in the first month

PROJECTS

pg-outbox (open source)

- Transactional outbox library for Node and Postgres, 1.2k GitHub stars, used in production by four companies

EDUCATION

University of Waterloo 2013 – 2017
BMath, Computer Science Waterloo, ON

- Dean’s Honours List, four terms

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2023)

SKILLS

TypeScript, Go, Node.js, Postgres, ClickHouse, Kafka, Redis, AWS (ECS, Lambda, RDS), Terraform, Docker, Kubernetes, React, Playwright

TALKS

- “Idempotency keys in practice”, Toronto Node Meetup, 2024
